

for efficient system cooling and ventilation

## Axial fans and fan drives

- ✓ Compact & stiff
- ✓ High static pressure
- ✓ High airflow
- ✓ Ideal for Tier 4 and Euro 5 cooling requirements

max.  $\varnothing$  801 mm

## WingFan Axial fan S16H

Blade profile	Best performance	Ø max.
S16H 	Ø 450 - 801 mm	801 mm

The S16H blade profile was developed using the latest CFD techniques for optimum performance in applications with many obstructions in the air path. The slender width of the blade makes it ideal for use with fan drives together with our special Fan drive hubs even when little space is available.

Our sophisticated modular system of flexible combinable components consisting of blades with different pitch angles, hubs sizes and mounting options (e.g. centre bosses or bushings) allows us to custom engineer the S16H fan to your specific application.

S16H blades are available in glass-fibre reinforced, lightweight nylon. All hubs are made from pressure die-cast aluminum.

For additional noise reduction and improved fuel economy, WingFan Axial fans can be supplied with Fan drives to control fan speed in proportion to engine cooling needs. Take advantage of our specially designed lightweight and compact system solutions.
