

for efficient system cooling and ventilation

Axial fans and fan drives

- ✓ Low Noise
- ✓ High efficiency
- ✓ High volume

sickle profile **S6Y**

best performance \varnothing 800 - 1.050 mm
max. \varnothing 1.137 mm

WingFan Axial fan S6Y

Blade profile	Best performance	Ø max.
S6Y 	Ø 800–1.050 mm	1.137 mm

The S6Y profile is designed specifically for low rpm noise sensitive applications requiring high airflow and moderate static pressures.

Our sophisticated modular system of flexible combinable components consisting of blades with different pitch angles, hubs sizes and mounting options (e.g. centre bosses or bushings) allows us to custom engineer the S6Y fan to your specific application.

S6Y blades are available in glass-fibre reinforced, lightweight nylon (PA or PAG). All hubs are made from pressure die-cast aluminum.
