max. \varnothing 1.423 mm

WingFan Axial fan U8Z

Blade profile	Best performance	Ø max.
U8Z 	Ø 550–1.250 mm	1.423 mm

The U8Z blade is well suited to stationary applications requiring high airflow at low rpm and low noise. The very wide chord width maximizes airflow at low rpm.

Our sophisticated modular system of flexible combinable components consisting of blades with different pitch angles, hubs sizes and mounting options (e.g. centre bosses or bushings) allows us to custom engineer the U8Z fan to your specific application.

U8Z blades are available in glass-fibre reinforced, lightweight nylon (PA or PAG). All hubs are made from pressure die-cast aluminum.

HYDRAULIC OIL COOLER

CONDENSER

V-TYPE COOLERS

WingFan Global

WingFan has a world-leading position in modular Axial fans for engine cooling and radiators as well as in HVAC and refrigeration.
